Learning Outcomes-Based Curriculum
For

F.Y.B. A. Applied Statistics

With effect from June 2019

Programme Outcomes:

PO1	A student should be able to display knowledge of summary of data, graphical representation, state important facts resulting from their studies and interpret them.
PO2	A student should get a relational understanding of Statistical concepts and apply the techniques in the areas of Economics, Psychology etc.
PO3	Students should be able to apply their skills and knowledge by summarizing information presented verbally or numerically into Statistical form, select and use appropriate Statistical techniques in order to process the information to draw appropriate conclusions.
PO4	A student should be made aware of history of Statistics and hence of its past, present and future role as part of our culture.

Course Structure for B. A. (Applied Statistics)

Semester	Course Code	Title	General / Special	Credits
I	STA1101	Descriptive Statistics - I	General	2
II	STA1201	Descriptive Statistics - II	General	2
III	STA2301	Probability theory and discrete probability distributions	General	2
IV	STA2401	Continuous Univariate Distributions and Applications of Statistics	General	2
V	STA3501	Testing of Hypotheses	General	3
VI	STA3601	Sampling Theory	General	3

PAPER CODE: STA1101
PAPER - I: Descriptive Statistics - I
[Credits - 3C]

Course outcomes	Suggested Pedagogy
This course imparts the knowledge about summary measures, correlation between two variables and index numbers. By learning this course students will be able to apply these methods to real life situations, draw valid conclusions and their interpretations.	Black Board teaching and problem-solving assignments

Objectives: The main objective of this course is to acquaint students with some basic concepts in Statistics. They will be introduced to some elementary statistical methods of analysis of data. At the end of this course students are expected to be able,

- (i) to compute various measures of central tendency, dispersion, skewness and kurtosis.
- (ii) to analyze data pertaining to attributes and to interpret the results.
- (iii) to compute and interpret various index numbers.

	Title and Contents	No. of Lectures
Unit -I	<p>1. Introduction to Statistics</p> <p>1.1 Meaning of Statistics as a Science.</p> <p>1.2 Importance of Statistics.</p> <p>1.3 Scope of Statistics: In the field of Industry, , Economics, Social Sciences, Management sciences, Agriculture, Insurance, Information technology, Education and Psychology Biological sciences, Medical sciences.</p> <p>1.4 Statistical organizations in India and their functions: CSO, ISI, NSS, IIPS (Devnar, Mumbai), Bureau of Economics and Statistics.</p>	4
Unit -II	<p>2. Population and Sample</p> <p>2.1 Types of characteristics: Attributes: Nominal scale, Ordinal scale, Variables: Interval scale, Ratio scale, discrete and continuous variables, difference between linear scale and circular scale</p> <p>2.1 Types of data: (a) Primary data, Secondary data (b) Cross-sectional data, time series data.</p> <p>2.2 Notion of a statistical population: finite population, infinite population, homogeneous population and heterogeneous population. Notion of a sample and a random sample</p> <p>2.4 Methods of sampling (description only): Simple random sampling with and without replacement (SRSWR and SRSWOR), stratified random sampling, systematic</p>	6

	sampling, cluster sampling and two-stage sampling.	
Unit – III	<p>3 Summary Statistics.</p> <p>Review / Revision of Presentation of Data</p> <p>3.1 Classification: Raw data and its classification, ungrouped frequency distribution, Sturges' rule, grouped frequency distribution, cumulative frequency distribution, inclusive and exclusive methods of classification, Open end classes, and relative frequency distribution.</p> <p>3.2 Measures of Central Tendency</p> <p>Review / Revision of following topics: Concept of central tendency of statistical data, Statistical averages, characteristics of a good statistical average.</p> <p>Arithmetic Mean (A.M.): Definition, effect of change of origin and scale, combined mean of a number of groups, merits and demerits, trimmed arithmetic mean, mode and median:</p> <p>Definition, formulae, merits and demerits. Empirical relation between mean, median and mode .</p> <p>Partition Values: Quartiles, Deciles and Percentiles, Box Plot.</p> <p>Geometric Mean (G.M.): Definition, formula, merits and demerits. Harmonic Mean (H.M.):</p> <p>Definition. Formula, merits and demerits.</p> <p>Orderly relation between arithmetic mean, geometric mean, harmonic mean</p> <p>Weighted Mean: weighted A.M., G.M. and H.M. Situations where one kind of average is preferable to others.</p> <p>3.3 Measures of Dispersion</p> <p>Review / Revision of following topics:</p> <p>Concept of dispersion, characteristics of good measure of dispersion.</p> <p>Range, Semi-interquartile range (Quartile deviation):</p> <p>Definition, merits and demerits, Mean deviation, Definition, merits and demerits, minimality property (without proof),</p> <p>Variance and standard deviation: Definition, merits and demerits, effect of change</p>	16

	<p>of origin and scale, combined variance for n groups (derivation for two groups).</p> <p>Mean squared deviation: Definition, minimality property of mean squared deviation (without proof),</p> <p>Measures of dispersion for comparison: coefficient of \ range, coefficient of quartile deviation and coefficient of mean deviation, coefficient of variation (C.V.)</p>	
Unit –IV	<p>4 Moments, Skewness and Kurtosis</p> <p>4.1 Raw moments (m'_r) for ungrouped and grouped data.</p> <p>4.2 Central moments (m_r) for ungrouped and grouped data, Effect of change of origin and scale.</p> <p>4.3 Relations between central moments and raw moments, upto 4th order (without proof).</p> <p>4.4 Concept of skewness of frequency distribution, positive skewness, negative skewness, symmetric frequency distribution.</p> <p>4.5 Bowley's coefficient of skewness : Bowley's coefficient of skewness lies between -1 to 1 (with proof), interpretation using Box plot.</p> <p>4.6 Karl Pearson's coefficient of skewness.</p> <p>4.7 Measures of skewness based on moments (β_1, γ_1).</p> <p>4.8 Concepts of kurtosis, leptokurtic, mesokurtic and platykurtic frequency distributions.</p> <p>4.9 Measures of kurtosis based on moments (β_2, γ_2).</p>	10
Unit – V	<p>5. Index Numbers</p> <p>4.10 Introduction.</p> <p>4.11 Definition and Meaning.</p> <p>5.3 Problems/considerations in the construction of index numbers.</p> <p>5.4 Simple and weighted price index numbers based on price relatives.</p> <p>5.5 Simple and weighted price index numbers based on aggregates.</p> <p>5.6 Laspeyre's, Paasche's and Fisher's Index numbers.</p> <p>5.7 Consumer price index number: Considerations in its construction. Methods of construction of consumer price index number – (i) family budget method (ii) aggregate expenditure method.</p> <p>5.8 Shifting of base, splicing, deflating, purchasing power.</p> <p>5.9 Description of the BSE sensitivity and similar index numbers.</p>	12

PAPER CODE: STA1201
PAPER - I: Descriptive Statistics II
[Credits - 3]

Course Outcomes	Suggested Pedagogy
This course imparts the knowledge about correlation between two variables, simple linear regression , curve fitting, theory of attributes. Students are introduced to the basics of time series analysis. By learning this course students will be able to apply these methods to real life situations, draw valid conclusions and their interpretations.	Black Board teaching and problem-solving assignments

Objectives: the main objective of this course is to acquaint student with concept of bivariate data. They will be introduced to some elementary statistical method to analyse the bivariate data.

- (i) to fit linear, quadratic and exponential curves to the bivariate data to investigate relation between two variables.
- (ii) to fit linear regression model to the bivariate data
- (iii) to compute the correlation coefficient for bivariate data and interpret it.

	Title and Contents	No. of Lectures
Unit -I	<p>1. Correlation</p> <p>1.1 Bivariate data, Scatter diagram and interpretation.</p> <p>1.2 Concept of correlation between two variables, positive correlation, negative correlation, no correlation.</p> <p>1.3 Covariance between two variables (m11) ,Definition, computation, effect of change of origin and scale.</p> <p>1.4 Karl Pearson’s coefficient of correlation (r) : Definition, computation for ungrouped data and interpretation. Properties: (i) $-1 \leq r \leq 1$ (without proof), (ii) Effect of change of origin and scale (without proof).</p> <p>1.5 Spearman’s rank correlation coefficient: Definition, derivation of formula, computation and interpretation (without ties). In case of ties, compute Karl Pearson’s correlation coefficient between ranks. (Spearman’s rank correlation coefficient formula with correction for ties not expected.)</p>	10
Unit -II	<p>2. Linear Regression Model</p> <p>2.1 Meaning of regression, difference between correlation and regression,</p> <p>2.2 Concept of error in regression, error modeled as a continuous random variable. Simple linear regression model: $Y = a + bX + \epsilon$, where ϵ is a continuous random variable with $E(\epsilon) = 0$, $V(\epsilon) = \sigma^2$. Estimation of a, b by the method of least squares. Interpretation of parameters. Statement of the estimator of σ^2.</p>	9

	2.3 Concept of residual, plot of residual against X, concept of coefficient of determination.	
Unit –III	3. Fitting of curves to the bivariate data 3.1 Fitting of line ($Y = a + b X$), 3.2 Fitting of second degree curve ($Y = a + b X + c X^2$), 3.3 Fitting of exponential curves of the type $Y = a b^X$ and $Y = aX^b$. In all these curves parameters are estimated by the method of least squares.	
Unit –IV	4. Theory of Attributes 4.1 Attributes: Concept of a Likert scale, classification, notion of manifold classification, dichotomy, class-frequency, order of a class, positive class- frequency, negative class frequency, ultimate class frequency, relationship among different class frequencies (up to three attributes), and dot operator to find the relation between frequencies, fundamental set of class frequencies. 4.2 Consistency of data upto 2 attributes. 4.3 Concepts of independence and association of two attributes. 4.4 Yule's coefficient of association (Q), $-1 \leq Q \leq 1$ interpretation.	
Unit –V	5. Time Series 5.1 Meaning of Time Series 5.2 Various components of a time series (Explanation and illustrations of each component) 5.3 Additive and Multiplicative methods for analysis of a time series 5.4 Methods of estimating trends (i) Freehand or Graphical method (ii) Method of semi-averages (iii) Method of moving averages (iv) Method of least squares 5.5 Simple numerical problems.	12
