PUNE**

**Syllabus
for**

S. Y. B. Sc. (Chemistry)

[Pattern 2019]

(B.Sc. Semester-III and Semester-IV)

From Academic Year

2020-2021

Deccan Education Society's
Fergusson College (Autonomous), Pune

S. Y. B. Sc. Chemistry (Pattern 2019)

From academic year 2020-2021

Particulars	Name of Paper	Paper Code	Title of Paper	No. of Credits
S. Y. B. Sc. Semester III	Theory Paper - 1	CHE 2301	Physical Chemistry	2
	Theory Paper - 2	CHE 2302	Organic Chemistry	2
	Practical Paper - 1	CHE 2303	Chemistry Practical - III	2
S.Y. B.Sc. Semester IV	Theory Paper - 3	CHE 2401	Inorganic Chemistry	2
	Theory Paper - 4	CHE 2402	Analytical Chemistry	2
	Practical Paper - 2	CHE 2403	Chemistry Practical - IV	2

S.Y. B.Sc. Semester III
Subject: Chemistry, Paper-1 (CHE 2301)
Paper Title: Physical Chemistry

[Credits-2]

Course Outcomes:

At the end of this course, students will be able to

- CO1.** Concept of kinetics, rate laws, types of order, difference between order and molecularity
- CO2.** Concept of distribution of solute amongst pair of immiscible solvents
- CO3.** Cyclic process such as Carnot's cycle. Operation of Carnot's cycle to determine thermodynamic efficiency. Statement of second law of thermodynamics.
- CO4.** Entropy of a system, mathematical definition of entropy (i.e. $\Delta S = q_{\text{rev}}/T$).
- CO5.** Gibb's Helmholtz equations and its properties & significance
- CO6.** Van't Hoff reaction isotherm and thermodynamic equilibrium constants Clausius –Clapeyron equation and its application
- CO7.** Discuss examples with derivation of zero order, first order (acid catalyzed ester hydrolysis) and second order (KI with $K_2S_2O_8$) reaction with dimensions. Factors affecting the rate of reaction
- CO8.** Interpretation of vapor pressure – composition diagram
- CO9.** Interpretation of temperature - composition diagram.
- CO10.** Distillation from temperature – composition diagram, Azeotrope, Partially immiscible liquid.

Unit	Details	Lectures
I	<p>Chemical Kinetics</p> <p>Introduction to Chemical kinetics, molecularity and order of reaction, reaction rates, rate laws, rate constant and its significance, Integrated rate law expression and its characteristics - zero order, first order, second order equal and unequal initial concentrations, differential rate laws for half-integral order reactions, pseudo molecular reactions, factors affecting rate of reaction, determination of order of reaction, collision theory of reaction rates (Arrhenius equation and non-Arrhenius behavior), transition state theory, numerical.</p>	[9]
II	<p>Distribution Law</p> <p>Nernst distribution law, Statement and thermodynamic proof for Nernst distribution law, Limitation of distribution law, association and dissociation of solute in solvent (modification in distribution law), application of distribution law, Numerical</p>	[3]
III	<p>Chemical Thermodynamics</p> <p>Thermodynamic Terms: System, Boundary, Surroundings, Homogenous and heterogeneous systems, Types of thermodynamic systems, Intensive and extensive properties, States of systems</p>	[8]

	(equilibrium and non-equilibrium states), Thermodynamic process, Reversible and irreversible process, Nature of heat and work, Internal energy, First law of thermodynamics, Carnot cycle, enthalpy of system, molar heat capacities, Adiabatic expansion of an ideal gas, work done in Adiabatic reversible expansion Second law of thermodynamics: spontaneous process, entropy, standard entropy of formation,	
IV	<p>Free Energy and Equilibrium</p> <p>Introduction, Helmholtz free energy, variation of Helmholtz free energy with volume and temperature, Helmholtz free change energy for chemical reaction, Gibb's free energy, Variation of Gibb's free energy with pressure and temperature, Gibb's free energy change for chemical reaction, Free energy change for physical transitions, Free energy change for an ideal gas; standard free energy change, Gibb's-Helmholtz equation, Properties and significance of Gibb's free change, Van't Hoff reaction isotherm, thermodynamic equilibrium constants, Relation between K_p and K_c for gaseous reactions, variation of equilibrium constant with temperature, Criteria for chemical equilibrium, Physical equilibrium, Clapeyron equation, Clausius-Clapeyron equation, Application of Clausius - Clapeyron equation, numericals.</p>	[8]
V	<p>Solutions</p> <p>Ways of expressing concentration, Solutions of gases in gases, Henry law, Solution of liquids in liquid, Types of solutions, Ideal solutions, Raoult's law, ideal and non ideal solutions, Henry's law, Application of Henry's law with example CS_2 in acetone, problems based on Raoult's law and Henry's law, vapor pressure-composition diagram of ideal and non ideal solution, temperature composition diagram of miscible binary solutions, distillation from temperature-composition diagram, Azeotropes, Theory of fractional distillation, steam distillation, solutions of solids in liquid.</p>	[8]

Books:

1. Principles of Physical Chemistry. By Maron and Pruton 4th Ed. Oxford & IBH.
2. Essentials of Physical Chemistry. By Bahl and Tuli, Reprint edition 2014.
3. Fundamentals of Analytical Chemistry by Skoog, West, Holler and Crouch.

Reference Books:

1. Elements of Chemical thermodynamics, L.K Nash 2nd Ed.
2. Chemical Thermodynamics by M. Roy.
3. Castellan, G. W. Physical Chemistry 4th Ed. Narosa, 2004.
4. Engel, T. & Reid, P. Physical Chemistry 3rd Ed. Pearson, 2013.
5. Atkins, P.W. & Paula, J. Physical Chemistry, 10th Ed., Oxford University Press, 2014

S. Y. B. Sc. Semester III
Subject: Chemistry Paper - 1 (CHE: 2302)
Paper Title: Organic Chemistry

[Credits-2]

Course Outcomes:

At the end of this course, students will be able to

- CO1.** Apply the concept of chirality to determine absolute configuration of organic compounds, Identify the stereochemical aspects affecting the stability of cycloalkanes.
- CO2.** Differentiate between reaction intermediates involved in organic synthesis. Comprehend the factors affecting the reaction selectivity towards substitution and elimination reactions.
- CO3.** Analyze the stereochemical factors affecting rate of reactions involving substituted cyclohexanes.
- CO4.** Structurally differentiate carbohydrates and amino acids, Draw different conformations of carbohydrates, Understand the methods to synthesize carbohydrates and amino acids and their reactions towards various reagents, Analyze the factors affecting the reactivity of carbohydrates and amino acids.
- CO5.** Study various reagents in organic transformations, Explore oxidizing and reducing agents, Understand sensitivity of reagents in different reaction conditions
- CO6.** Learn nomenclature and types of heterocycles, Learn the methods to synthesize 5 and 6 membered heterocycles and their reactions towards various reagents, Interpret the mechanism involved in synthesis of heterocycles
- CO7.** Study different name reactions and their significance in chemistry, Explore the mechanism of reactions and factors affecting them.

Unit	Details	Lectures
I	<p>Stereoisomerism Recapitulation of Stereochemistry in general, Baeyer's strain theory, Conformation and stability of cyclohexane, mono and di-substituted cyclohexane with CH₃ groups. Locking of conformation.</p>	[5]
II	<p>Reaction Mechanism Introduction to reaction intermediates: carbocation, carbanion, carbene, nitrene and free radicals. Reaction mechanism of Aliphatic nucleophilic substitution (S_N¹, S_N² and S_Ni reactions) and Elimination (E1, E2 and E1cB, Saytzeff and Hoffmann elimination) reactions and factors affecting their rate of reaction. E2-elimination reactions in substituted cyclohexane (cis and trans 1-bromo-2-methyl cyclohexane). Competitive studies between substitution and elimination reactions.</p>	[5]

III	<p>Introduction of Bio-Molecules</p> <p>Carbohydrates: Definition, classification, configuration of (+) Glucose (D/L, d/l, R/S), Fischer-Haworth and chair formulae, epimers, anomers, mutarotation, Killiani-Fischer synthesis and Ruff degradation.</p> <p>Reaction of monosaccharide (glucose): oxidation, reduction, osazone and ester formation. Brief account of disaccharides (structure only): Sucrose, cellobiose, maltose and lactose.</p> <p>Amino acids: Fischer projection, relative configuration, classification, structures, Zwitterion, Isoelectric point.</p> <p>Preparation of Amino Acids: Strecker synthesis, Gabriel's phthalimide synthesis, amination of α-halo acids, Reductive Amination, Reactions of Amino acids: esterification, acetylation, peptide bond synthesis, reaction with Dansyl chloride, HNO_3 and ninhydrin test.</p>	[7]
IV	<p>Reagents in Organic Synthesis</p> <p>Reducing agents: Catalytic hydrogenation (homogenous and heterogeneous), Birch reduction, Bouvaelt-Blanc Reduction, NaBH_4, LiAlH_4, Sn/HCl, $\text{NH}_2\text{NH}_2/\text{OH}$.</p> <p>Oxidizing agents: KMnO_4, $\text{K}_2\text{Cr}_2\text{O}_7$, Jones reagent, PDC, PCC, Per acids, OsO_4, Prevost oxidation, MnO_2 and SeO_2.</p>	[5]
V	<p>Chemistry of Heterocyclic Compounds with One Hetero Atom</p> <p>Classification and nomenclature, Structure, aromaticity in 5-numbered and 6-membered rings containing one heteroatom; Synthesis, reactions and mechanism of substitution reactions of: Furan, Pyrrole (Paal-Knorr synthesis, Knorr pyrrole synthesis and Hantzsch synthesis), Thiophene, Pyridine (Hantzsch synthesis), Nitration, Sulphonation, Acylation and Catalytical reduction.</p>	[6]
VI	<p>Name Reactions and Rearrangements(with mechanism)</p> <p>Name reactions: Reimer-Tiemann, Kolbe's-Schmidt, Wittig, Wittig Horner, Perkin, Cannizzaro, Knoevenagel and Reformatsky reaction, Aldol, Claisen and Benzoin condensation. Rearrangements: Pinacol-Pinacolone, Beckmann and Baeyer Villiger oxidation, Hofmann bromamide degradation, Curtius and Fries rearrangement.</p>	[8]

Books-

1. Organic Chemistry by Stanley Pine McGraw-Hill Book Company 5th edition.
2. Organic Chemistry by Morrison Boyd & Bhattacharjee Pearson Education 7th Ed.

Reference Books:

1. Organic Chemistry by Paula Bruice Pearson Higher Education 7th edition.
2. Organic Chemistry by Clayden, Greeves, Oxford press.
3. Reactions, rearrangements and reagents - S N Sanyal.
4. Heterocyclic Chemistry by Joule and Keith Mills, Wiley-Blackwell 4th edition
5. Biochemistry by Satyanaryana Elsevier 4th edition
6. Organic Chemistry - 7th Ed. Morrison, Boyd & Bhattacharjee Pearson Education, 2011
7. Outline of Biochemistry 5th Ed., Conn, Stumpf Bruening & Roy Doi John Wiley 1987
8. Stereochemistry of carbon compounds - E. L. Eliel
9. Heterocyclic Chemistry 5th Ed. John A. Joule and Keith Mills, Wiley-Blackwell 2010
10. Reactions, rearrangements and reagents - S N Sanyal

S. Y. B. Sc. Semester III
Subject: Chemistry Paper -1 (CHE2303)
Paper Title: Physical & Organic Chemistry Practical

[Credits-2]

Course Outcomes:

At the end of this course, students will be able to

- CO1** Acquire skill of crystallization, record correct m. p. / b. p.
- CO2** Perform the complete chemical analysis of the given organic compound and should be able to recognize the type of compound.
- CO3** Perform the given organic preparation according to the given procedure.
- CO4** Follow the progress of the reaction by using TLC technique.
- CO5** Set up the apparatus properly for the given experiments.
- CO6** Observations about temperature
- CO7** Miscibility of phases

List of practicals (Compulsory 10 + 2 Activity)**A. Physical Chemistry Practical (Any Five)**

1. To determine critical solution temperature of phenol water system.
2. To determine molecular weight of given organic liquid by steam distillation.
3. Determination of solubility of benzoic acid at different temperature and to determine ΔH of dissociation process.
4. To determine the partition coefficient of iodine between water and carbon tetrachloride.
5. To study and compare the hydrolysis of an ester using HCl and H_2SO_4 catalyst
6. To study the neutralization of acid (HCl) by base (NaOH) and CH_3COOH by NaOH.
7. Determination of enthalpy of hydration of copper sulphate.
8. Report of one-day industrial study tour [either in semester III or IV].

B. Organic Chemistry Practical (Any Five)

1. Qualitative analysis of unknown binary organic compounds. (**Any four**)
Solid-Solid mixtures only (**Including elemental test**)
2. Organic Preparation. (**Any one**)
(**Including Crystallization, MP, TLC**)
 - 1) Preparation of phthalimide from phthalic anhydride
 - 2) Benzoylation of one of the following amines (aniline, *o*-, *m*-, *p*-toluidines and *o*-, *m*-, *p*-anisidine) and one of the following phenols (β -naphthol, resorcinol, *p*-cresol)
 - 3) Preparation of Glucosazone from D-glucose.
 - 4) Preparation of 2:4- DNP derivative of aldehyde or ketone.

S.Y. B.Sc. Semester IV
Subject: Chemistry Paper -1 (CHE: 2401)
Paper Title: Inorganic Chemistry

[Credits-2]

Course Outcomes:

At the end of this course, students will be able to

- CO1** Understand Arrhenius theory, Bronsted-Lowry Lewis acids, Lux-Flood theory Identify Conjugate acid-base pairs, Correlate Strength of acids & bases with pK_a & pK_b , Compare Strength of acids & bases in different solvents, Levelling effect. Compare strength of acids & bases on the basis inductive, resonance & steric effect
- CO2** Position of s & p-block elements Relative stability of different oxidation states diagonal relationship and anomalous behaviour of first member of each group Allotropy and catenation.
- CO3** Explain the properties of coordination compounds, Differentiate between inner & outer orbital complexes write structure from IUPAC Nomenclature, Relate Valence Bond Theory and Hybridization, Solvent numerical of Effective Atomic Number. Understand Concept of Isomerism, Structural isomer. Explain spectral properties & colours.
- CO4** Explain positions of the d elements in the periodic table; know the electronic configurations of the transition (d-block) elements & stability of various oxidation states, understand the general characteristics of the d block elements, describe the properties of the d block elements & colours, Oxidation states d block elements & magnetic properties, Catalytic activities of d block elements.
- CO5** Position of Noble gas elements in periodic table, Causes of Noble behaviour of the gases, Occurrence & Physical properties of Noble gas elements. Clathrates of Noble gases & its structure, Reactivity of Xenon

Unit	Details	Lectures
I	<p>Acids, Bases and Solvents: Different theories of acids – bases: Arrhenius theory, Bronsted-Lowry concept, solvated proton, conjugate acid – base pairs, relative strength of acids and bases - trends of hydracids and oxyacids, Pauling's rules, levelling and differentiating solvents, Lewis acid-base concept, classification of Lewis acids and bases and their relative strength, Lux-Flood theory, Properties of solvents.</p>	[6]
II	<p>Chemistry of s and p Block Elements: Position of elements in the periodic table, electronic configuration, trends in properties like atomic size, ionization potential, electronegativity, electron affinity, relative stability of different oxidation states, Inert pair effect, anomalous behavior of first member of each group. Differences of Li and Be from other members of their groups (the diagonal relationship). Compounds of s-block elements: oxides, hydroxides, peroxides, super</p>	[16]

	<p>oxides. Compounds of Gr – I, Gr – II ions with Crown ether and Cryptands, separation of s-block elements using crown ethers.</p> <p>Chemistry of Boron – Electron deficient nature of hydrides, halides (BH_3, BX_3) and their polymerisation. Structure and bonding of diborane and tetraborane (2e-3c bonds). Boric acid and borates, Borazine, Boron nitrides, Borax - properties and structure.</p> <p>Chemistry of Carbon and Silicon - Allotropy and catenation. Intercalation compounds e.g. Graphite Intercalation compounds (GIC), CNT (Carbon Nanotube), graphenes and fullerenes. Properties, structure and uses of silanes, silicates, silicones and siloxanes.</p> <p>Chemistry of Nitrogen and Phosphorous - The presence of lone pair and basicity of trivalent compounds; hydrides and oxides of N and P; Phosphazene, phosphonitrilic acid $(PNCl_2)_n$. d-orbital participation in P-compounds.</p> <p>Chemistry of Sulphur - Oxides, oxyacids, poly sulphides – properties and structure; S-N compounds $(SN)_x$; d-orbital participation in S-Compounds.</p> <p>Chemistry of Halogen – Color of Halogens in different medium, hydrides, their acidity; inter-halogen compounds; polyhalide ions, pseudohalogens, cationic compounds of iodine – properties and structure.</p>	
III	<p>Coordination Chemistry Werner's theory – the primary, secondary valency, valence bond theory (inner and outer orbital complexes), electroneutrality principle, back bonding, Sidgwick's theory, EAN Rule, Basic terms and IUPAC Nomenclature of coordination compounds (excluding the polynuclear ones), Isomerism, Types of Isomers (Structural isomerism and Stereoisomerism).</p>	[6]
IV	<p>Chemistry of d-Block Elements: Position of d-block in the periodic table, General group trends with special reference to electronic configuration, size of atoms and ions, variable oxidation states, catalytic properties, complex formation ability, colour, magnetic properties.</p>	[4]
V	<p>Noble Gases: Occurrence and uses, rationalization of inertness of noble gases, Clathrates, Preparation properties and molecular structure of xenon fluorides (XeF_2, XeF_4 and XeF_6), oxides and oxofluorides (VSEPR Theory). Nature of bonding in noble gas compounds (VB and MO treatment for XeF_2 and XeF_4).</p>	[4]

Books-

1. Concise Inorganic Chemistry by J. D. Lee - 5th edition.
2. Coordination Chemistry 2009 D. Banerjee

References:

- 1) Inorganic Chemistry, D.F. Shriver & P.W. Atkins- C. H. Longford ELBS - 2nd edition.
- 2) Basic Inorganic Chemistry, F.A. Cotton and G. Wilkinson, Wiley Eastern Ltd 1992.
- 3) Inorganic Chemistry – J D Lee
- 4) Concept and Model of Inorganic Chemistry by Douglas – Mc Daniels - 3rd edition.
- 5) Chemistry by Raymond Chang - 5th edition.
- 6) Inorganic Chemistry by A. G. Sharpe - 3rd edition.
- 7) Fundamental Chemistry by A. K. Dee.(3rd Ed.)
- 8) Advanced Inorganic Chemistry, Satyaprakash, Tuli, Basu.
- 9) Text book of Inorganic Chemistry, P. L. Soni.

S. Y. B. Sc. Semester IV
Subject: Chemistry Paper -1 (CHE: 2402)
Paper Title: Analytical Chemistry

[Credits-2]

Course Outcomes:

At the end of this course, students will be able to

- CO1** Understand terms analytical chemistry, chemical analysis, sampling implement applications of analytical chemistry in various areas describe various instrumental methods and other techniques, choose suitable method of analysis.
- CO2** Identify and describe errors in quantitative analysis. Understand and measure the terms accuracy and precision, Perform computations using Significant figures
Analyze reliability of results
- CO3** Explain common ion effect and solubility product and its applications in inorganic qualitative analysis, Understand different groups for basic radicals, Choose group reagent and precipitating agents for different cations, Identify interfering anions and perform its removal, Separate basic radicals from mixture, Perform detection of acidic radicals
- CO4** Classify compounds with different functional groups, Perform different tests for detection of elements by Lassigen's test, Perform characteristic tests for different functional groups. Describe different methods of quantitative analysis like Liebig's method, Kjeldahl's method, Carius tube method etc. Define empirical and molecular formula
- CO5** Define equivalent weight, molecular weight, normality, molality, primary & secondary standards. Understand different terms to express concentrations of the solution. Prepare standard solution. Calibrate various apparatus such as burette, pipette, volumetric flask, barrel pipette etc Understand types instrumental and non instrumental analysis, Explain role of indicators, Know mixed and universal indicators, Describe neutralization curves for various acid base titration, Choose suitable indicator for titration, Explain principle of complexometric precipitation and redox titrations..

Unit	Details	Lectures
I	Introduction to Analytical Chemistry Introduction, chemical analysis, applications of chemical analysis, sampling, types of analysis, common techniques, instrumental methods, other techniques, factors affecting on choice of method.	[2]
II	Errors in Quantitative Analysis Introduction, Error, accuracy, precision, methods of expressing accuracy and precision, classification of errors, significant figures and computations, distribution of random errors, mean and standard deviations, reliability of results, numerical.	[4]

III	<p>Inorganic Qualitative Analysis Basic principle, common ion effect, solubility, solubility product, preparation of original solution, classification of basic radicals in groups, separation of basic radicals, removal of interfering anions (phosphate and borate), detection of acidic radicals.</p>	[7]
IV	<p>Qualitative & Quantitative Analysis of Organic Compounds Qualitative Analysis: Types of organic compounds, reactions of different functional groups, analysis of binary mixtures.</p> <p>Quantitative Analysis: Analysis—estimation of C, H, (O) by combustion tube, detection of nitrogen, sulfur, halogen and phosphorous by Lassigen's test, estimation of nitrogen by Dumas's Kjeldahl's method, estimation of halogen, sulphur and phosphorus by Carius Method, determination of empirical and molecular formula, numerical problems.</p>	[8]
V	<p>Non Instrumental Volumetric Analysis Introduction of volumetric (titrimetric) analysis, titrant, titrand, direct titration, indirect titration-back and blank titration Introduction, methods of expressing concentrations, primary and secondary standard solutions, Apparatus used and their calibration: burettes, micro burettes, volumetric pipettes, graduated pipettes, volumetric flask, methods of calibration, Instrumental & non-instrumental analysis, principles & types</p> <p>Acid–Base Titrations Acid base indicators, Ostwald's Theory of acid base indicators, mixed and universal indicators Strong acid–Strong base, Weak acid–strong base, Weak Acid-Weak base titration, Displacement titrations, polybasic acid titrations. (Discuss titration with respect to neutralization and equivalence point determination, titration curves and limitations)</p> <p>Redox Titrations Principle of redox titration, detection of equivalence point using suitable indicators, Titration of oxalic acid vs KMnO_4, Application- Estimation of Fe(II) & H_2O_2</p> <p>Complexometric Titrations Principle, Mg-EDTA titration, Role of Metal ion indicators in EDTA titration, choice of indicators, Applications, Estimation of Al (III) & Nickel.</p> <p>Iodometric Titration: Iodometry (Direct and Indirect Titration) Principle, detection of end point, difference between iodometry and iodimetry, Standardization of sodium thiosulphate solution using potassium dichromate and iodine method, Applications, estimation of Cu.</p>	[15]

S. Y. B. Sc. Semester IV
Subject: Chemistry Paper -2 Paper -1 (CHE 2403)
Paper Title: Inorganic & Analytical Chemistry Practical

[Credits-2]

Course Outcomes

At the end of this course, students will be able to

- CO1** Basic properties of salt
- CO2** Separation of different groups
- CO3** Confirmatory tests of Cations & anions
- CO4** Common ion effect, Solubility principle
- CO5** Phosphate & Borate removal scheme
- CO6** Preparation of different concentrations of solutions.
- CO7** Volumetric estimations types

List of practicals (Compulsory 10 + 2 Activity)

Any ten experiments from the list of experiments

Inorganic Qualitative Analysis (Any Four)

1. Two simple mixtures (without phosphate or borate)
2. Three Mixtures containing $(\text{PO}_4)^{3-}$ (With $(\text{PO}_4)^{3-}$ removal)
3. Three Mixtures containing $(\text{BO}_3)^{3-}$ (With $(\text{BO}_3)^{3-}$ removal)

Preparation of Coordination Complexes and Yield (Any One)

1. Preparation of $[\text{Cu}(\text{NH}_3)_4]\text{SO}_4 \cdot \text{H}_2\text{O}$
2. Preparation of $[\text{Ni}(\text{NH}_3)_6]\text{Cl}_2$

B. Analytical Chemistry Practicals (Any Five)

1. Determination of Ca in presence of Mg using EDTA.
2. a) Preparation of standard 0.05N oxalic acid solution and standardization of approx 0.05N KMnO_4 solution.
b) Determination of the strength of given H_2O_2 solution with standard 0.05N KMnO_4 solution.
3. a) To determine the amount of Aspirin from a given tablet.
b) To find the absolute error & relative error with reference to the mean of analysis.
c) To find the standard deviation & relative standard deviation with reference to the mean of analysis.
4. Estimation of Nickel/Aluminum from the given salt solution by using Eriochrome Black-T indicator (Back titration method).
5. To determine the amount of copper from the given solution iodometrically.

-
6. a) To choose the best indicator in the titration between standard 0.05N oxalic acid solution & approx. 0.05N NaOH.
 - b) To standardize the approx. 0.05N NaOH solution against standard 0.05N oxalic acid solution using best indicator.
 - c) To determine the amount of acetic acid in commercial vinegar by titrating with approx. 0.05N NaOH solution using selected best indicator.
7. To find out the amount of Acetone in the given solution iodometrically.
 8. Report of one day industrial study tour [either in semester III or IV].
