Syllabus

for

S. Y. M. Sc. (Data Science)

[Pattern 2019]

(S.Y. M.Sc. Semester-III and Semester-IV)

From Academic Year

2020-21

Deccan Education Society's
Fergusson College (Autonomous), Pune

S.Y.M.Sc. Data Science (Pattern 2019)

From academic year 2020-21

Particulars	Name of Paper	Paper Code	Title of Paper	No. of Credits
S.Y. M.Sc. Semester III	Paper - 1	CSD5301	Optimization Techniques	4
	Paper - 2	CSD5302	Emerging Trends in Data Science	4
	Paper - 3	CSD5303	Deep Learning	4
	Paper - 4	CSD5304	Data Science Case Studies OR	4
		CSD5305	Artificial Intelligence OR	
		CSD5306	MOOC-II	
	Paper - 5	CSD5307	Data Science Practical – V (Deep Learning)	4
	Paper - 6	CSD5308	Data Science Practical – VI (Project)	4
S.Y. M.Sc. Semester IV	Paper - 1	CSD5401	Industrial Training	8

S.Y. M.Sc. Semester III

Subject: Data Science

Paper -1 (CSD5301): Paper title: Optimization Techniques

[Credits-4]

Course Outcomes

At the end of this course, students will be able to

CO1 Finding stationary points and locating local minima and local maxima of given single variable and multivariable functions

CO2 Solving Linear programming problems, IPP and learning the tools and techniques of quantitative analysis. Identify the real life problem for which a linear and dynamic optimization model is developed.

CO3 To develop those parts of the optimization theory that apply for linear and Network models.

CO4 Learning various optimization techniques and gaining knowledge to optimize hyperparameters since it is a key issue in a machine learning algorithm.

Unit	Details	Lectures
I	**Classical optimization techniques** 1.1 Maxima, Minima, critical points of single variable functions and multivariable functions 1.2 Single variable optimization with and without constraints, multi – variable optimization with and without constraints, method of Penalty methods, Lagrange multipliers 1.3 Kuhn-Tucker conditions	[10]
II	**Linear programming** 2.1 Application of Simplex method 2.2 Two-phase method 2.3 Big-M method, Duality 2.4 Integer linear Programming 2.5 Sensitivity analysis. Assignment problem: Hungarian's Algorithm, Degeneracy, applications, Unbalanced problem. 2.6 Traveling salesman problem	[15]
III	**CPM/PERT** 3.1 Simulation of CPM/PERT network 3.2 Analysis of an activity network 3.3 Simulation of inventory system and manufacturing System	[8]
IV	**Hyperparameter optimization** 4.1 Gradient of a function. 4.2 Steepest descent method 4.3 Nelder Mead's Simplex search method 4.4 Newton's method.	[15]

S.Y. M.Sc. Semester III

Subject: Data Science

Paper -2 (CSD5302): Paper title: Emerging Trends in Data Science

[Credits-4]

Course Outcomes

At the end of this course, students will be able to

CO1 Use advanced data science methods and tools

CO2 To leverage statistical sciences, machine learning technologies and industry-specific datasets

CO3 to implement unique data models that can solve challenging problems across all industries

Unit	Details	Lectures
I	**Introduction** 1.1 Data science Concept 1.2 Different Methodology 1.3 Cloud and Data Science 1.4 Data Preparation, Data Transformation 1.5 Data visual representation 1.6 Machine learning Concept and algorithm	**[15]**
II	**Technology Used in Data Science** 2.1 Technology Implementation method with data 2.2 Exploring and Preparing auto data 2.3 Validating automotive data 2.4 Visualize preliminary data wrangling results 2.5 Run summary statistics on the results 2.6 Exploring visualization tool for data 2.7 Implementation of ML concept	**[18]**
III	**Various Domain based Case study implementation with technology**	**[15]**

S.Y. M.Sc. Semester III

Subject: Data Science

Paper - 3 (CSD5303): Paper title: Deep Learning

[Credits-4]

Course Outcomes

At the end of this course, students will be able to

CO1 To understand basics of deep learning
CO2 To study the architecture of deep neural networks.
CO3 Study various tools required for deep learning
CO4 Hands on to study deep neural networks in real life applications

Unit	Details	Lectures
I	**Foundations of Neural Network and Deep Learning** 1.1 Introduction to deep learning 1.2 Neural Network Basics 1.3 Artificial neural network and its layers 1.4 Necessary activation functions 1.5 Notion of Partial and total Derivatives and functions 1.6 Weights and weight sharing, loss function, partial ordering	[5]
II	**Deep Learning Networks** 2.1 Working with Tensorflow, Keras , Pytorch 2.2 Backpropagation in Feed-forward Networks 2.3 Feed Forward for Classification and Regression	[7]
III	**Improving the Deep Neural Networks** 3.1 Regularization: L1, L2, Dropout 3.2 Early Stopping 3.3 Optimization for Training Deep Models 3.4 Hyperparameter Tuning	[8]
IV	**Convolutional Neural Networks** 4.1 Introduction to Convolutional Networks 4.2 Understanding Convolution and Pooling 4.3 Different Classic CNN Architectures 4.4 CNN with MNIST Dataset and also with other datasets 4.5 Application of CNN in Computer Vision: Image Classification, Object detection	[8]
V	**Recurrent Neural Networks** 5.1 The Sequential Problem 5.2 The RNN Model 5.3 The LSTM Model 5.4 Application of RNN in NLP and Time Series Forecasting	[8]
VI	**Restricted Boltzmann Machines (RBM)** 6.1 Introduction to RBMs	[8]

	6.2 Training RBMs 6.3 RBM MNIST 6.4 Collaborative Filtering With RBM 6.5 Application of RBM in Recommender Systems	
VII	**Autoencoders** 7.1 Introduction to Autoencoders 7.2 Application of Autoencoders in Recommender Systems and Image Processing	**[4]**

Subject: Data Science

Paper - 4 (CSD5304): Paper title: Data Science Case Studies

[Credits-4]

Course Outcomes

At the end of this course, students will be able to

CO1 Solve a real business problem statement in a particular domain.

CO2 Have hands on experience of working on prevalent Data Science tools.

CO3 Deliver a comprehensive end to end project

Unit	Details	Lectures
I	**Brief Introduction to Data Science** 1.1 What is Data Science 1.2 Why Now? - The importance of Data Science in today's business environment. 1.3 Difference between Data Science, Business Intelligence and Data Analysis 1.4 Real World Applications of Data Science 1.5 Popular Tools and Languages to Apply Data Science 1.6 A Typical Data Science Team 1.7 Team Structures	[4]
II	**Brushing Up on your MS Excel Skills** 2.1 Basic Functions 2.2 Advanced Functions 2.3 Sorting, Filtering and Pivot tables 2.4 Charts and other visualization tools 2.5 Handling Date formats for time series analysis 2.6 Short Cut Keys 2.7 Making simple Dashboards	[6]
III	**Making Data Work for You!** 3.1 What can Data do? 3.2 Types of Data 3.3 Data Exploration 3.4 Data Sources and Risks 3.5 Data Cleaning 3.6 Manipulating Time Series Data 3.7 Data Storage and Retrieval	[4]
IV	**Analysis, Prediction and Visualization** 4.1 Generating Charts and plots to better understand the 4.2 output 4.3 Interpretation 4.4 Prediction	[4]

	4.5 Conclusion	
V	**Communicate Results** 5.1 Creating Dashboards in Tableau 5.2 Creating a Story in Tableau 5.3 Creating Dashboards in MS Excel 5.4 Generate High End Presentations in MS PowerPoint	**[4]**
VI	**The Data Science Workflow** 6.1 Understand the steps in the life cycle of a Data Science project 6.2 Theoretical Vs Applied Data Science	**[2]**
VII	**Case Study** 7.1 Problem Statement – Domain and scope of the study 7.2 Data Source 7.3 Data Preparation 7.4 Choice of Model 7.5 Model Building 7.6 Type of tools to use 7.7 Analysis 7.8 Presentation	**[24]**

S.Y. M.Sc. Semester III

Subject: Data Science

Paper - 4 (CSD5305): Paper title: Artificial Intelligence

[Credits-4]

Course Outcomes

At the end of this course, students will be able to

CO1 Present an overview of artificial intelligence (AI) principles and approaches
CO2 Develop a basic understanding of the building blocks of AI
CO3 Apply AI techniques to different real world problems and games

Unit	Details	Lectures
I	**Introduction to Artificial Intelligence** 1.1 What is AI? Early work in AI 1.2 AI and related fields 1.3 AI problems and Techniques	**[4]**
II	**Problems, Problem Spaces and Search** 2.1 Defining AI problems as a State Space Search: examples 2.2 Production Systems 2.3 Search and Control Strategies 2.4 Problem Characteristics 2.5 Issues in Design of Search Programs 2.6 Additional Problems	**[8]**
III	**Heuristic Search Techniques** 3.1 Generate-and-test 3.2 Hill Climbing 3.3 Best First Search 3.4 Problem Reduction 3.5 Constraint Satisfaction 3.6 Mean-Ends Analysis	**[8]**
IV	**Knowledge Representation** 4.1 Representations and Mappings 4.2 Approaches to Knowledge Representation 4.3 Knowledge representation method 4.4 Propositional Logic 4.5 Predicate logic 4.6 Representing Simple facts in Logic 4.7 Representing Instances and Is-a relationships 4.8 Computable Functions and Predicates 4.9 Resolution 4.10 Forward and backward chaining	**[8]**
V	**Slot – and – Filler Structures** 5.1 Weak Structures	**[8]**

	5.2 Semantic Networks 5.3 Frames 5.4 Strong Structures 5.5 Conceptual Dependencies	
VI	**Game Playing** 6.1 Minimax Search Procedures 6.2 Adding alpha-beta cutoffs 6.3 Uncertainty Reasoning: Basic Probability Axioms, Baye's Rule, Baysian Classification, Certainty Factor Theory, Dempster Shafar Theory	**[6]**
VII	**Learning** 7.1 What is learning? 7.2 Rote Learning 7.3 Learning by taking advice 7.4 Learning in problem solving 7.5 Learning from examples 7.6 Explanation based learning	**[6]**

S.Y. M.Sc. Semester III

Subject: Data Science

Paper - 5 (CSD5307): Paper title: Data Science Practical – V(Deep Learning)

[Credits-4]

Course Outcomes

At the end of this course, students will be able to

CO1 To be familiar with basics of deep learning concepts
CO2 Hands on with various neural networks
CO3 Working with applications based on deep neural networks.
CO4 Handling real time case studies in deep learning

List of practical (Compulsory 10 + 2 Activity)

1	Deep Learning using Keras
2	Deep Learning using Pytorch
3	Deep Learning using Tensorflow
4	Application of CNN in Computer Vision
5	CNN in Image Classification
6	CNN in Object Detection
7	Application of RNN in NLP
8	RNN in Time Series Forecasting
9	Application of RBM in Recommender Systems
10	Case Study

S.Y. M.Sc. Semester III

Subject: Data Science

Paper - 6 (CSD5308): Paper title: Data Science Practical – VI (Project)

[Credits-4]

Course Outcomes

At the end of this course, students will be able to

CO1 Understand the software development life cycle of Data Science project.
CO2 Define problem statement and build complete solution to a specific problem.
CO3 Use different tools and techniques for solving problem and representing analysis.

Objective:

The Objective of project is to make the students understand life cycle of data science project. Students should be able to define a problem statement, collect data and process it and explore the avenues in data science modeling (e.g. Predictive).

The Project can be platform, language and technology independent. Project will be evaluated by project guide. Assessment will be done weekly in the respective batch. Evaluation will be on the basis of weekly progress of project work, progress report, oral, results and documentation and demonstration.

You should fill your status of the project work on the progress report and get the Signature of project guide regularly. Progress report should sharply focus how much time you have spent on specific task. (The format of progress report is given as follow.) You should keep all signed progress report. Project will not be accepted if progress report is not submitted and all responsibility remains with student.

Project Progress Report

Roll No and Name of the Student	
Title of the project

(S.Y. M.Sc. Semester-IV)

From Academic Year

2020-21

S.Y. M.Sc. Semester IV

Subject: Data Science

Paper - 1 (CSD5401): Paper title: Industrial Training

[Credits-8]

Course Outcomes

At the end of this course, students will be able to

CO1 Get an insight into the actual work culture of the I.T. industry.

CO2 Make the students aware of the skills and technologies needed to work in the I.T. industry.

CO3 Understand different ways to approach a problem and build solution.

Duration: Minimum 3 months

The necessary details for Industrial Training course are as follows:

A student can complete Industrial Training Project (ITP) in any I.T. industry / academic institute / with a research project of a teacher / an expert funded by any funding agency for a minimum period of three months.

1. There will be a teacher coordinator for a group of 10 students. A teacher coordinator is responsible to:

- Maintain a weekly status / progress report of the student.
- Keep in touch with the reporting authorities from industry for each student.
- Help the students to solve their difficulties.
- Arrange the meeting and presentations as per requirement.
- Guide each student for preparing final project report.
- Keep complete documentation record for each student separately.
- Internal assessment of each student for 50 marks.

The workload for this teacher coordinator is proposed as four hours per week.

The workload for a teacher coordinator who is guiding 3 students doing their ITP in Fergusson College (Autonomous) Pune (no mentor from industry) is proposed as four hours per week.

2. Guidelines for submitting the final project report

The student must include the project completion certificate issued by the respective industry /research institute/educational institute in the report. A student will submit two hard bound copies and one CD: Student Copy, Department copy, CoE copy of the work carried out during ITP (CD to be given by students).

3. Scheme of Assessment:

- **Continuous Internal Assessment**

Evaluation for internal 50 Marks will be done by the Internal Teacher Coordinator.

Description	**Marks**
Weekly Reports (Minimum 12)	30
Final Project Report writing	10
Presentation Demo	10

- **End Semester Assessment**

  Evaluation for external 50 Marks will be done by a panel of three consisting of One Industrial Expert, One Academic Expert (External from other college) and One Internal Examiner. Each examiner is expected to assess each student for 50 marks independently and average of the three scores is to be considered as the final ESE score (out of 50)

Description	**Marks**
Knowledge and Execution of the System	15
Final Project Report	15
Presentation	10
Viva	10

- The internal examiner(s) will be responsible for submitting the total marks out of 100 to examination section.
- The final grade (to be printed on the mark list) is to be calculated on the basis of UGC 10 point scale.

Marks	Grade	Grade Point
90 – 100	**O: Outstanding**	**10**
80-89	**A+: Excellent**	**9**
70-79	**A: Very Good**	**8**
65-69	**B+: Good**	**7**
60 - 64	**B: Above Average**	**6**
55-59	**C+: Average**	**5**

50 -54	**C: Below Average**	**4**
45-49	**D: Satisfactory**	**3**
40-44	**E:Pass**	**2**
0 -39	**F: Fail**	**0**
	Absent	**0**

Note:- A student who has obtained Grade F will have to carry out this project once again for a complete semester (minimum three months).
