SYLLABUS UNDER AUTONOMY

M.Sc. - II

Environmental Science

[Pattern 2019]

SEMESTER – III

From Academic Year
2020-2021

EVS5301: Environmental Statistics (4 Credits)**Course Outcomes**

After learning this course students will be able to

CO1: Learn the basic concepts of Environmental statistics.

CO2: Introduced to various common tools that are used for data classification and analysis.

CO3: Understand the importance of hypothesis testing and also learn prediction models.

CO4: Applications of statistics in Environmental Science will be introduced through various examples.

| Units | Contents |
|---|---|
| <p style="text-align: center;">Unit I</p> | <p>Foundation of Environmental Statistics</p> <ul style="list-style-type: none"> ● Concept of Population, Sample, variable, parameters, random variable and parameters of interest ● Sampling, Types of random and non-random sampling ● Experiment design ● Concepts of statistical inference, sample selection ● Concept of data, its types; Discrete and continuous data, frequency and non-frequency data ● Frequency distributions ● Data presentation methods; Diagrammatic methods Graphical methods |
| <p style="text-align: center;">Unit II</p> | <p>Measure of Central Tendency</p> <ul style="list-style-type: none"> ● Mean ● Median ● Mode ● Geometric mean. ● Harmonic mean ● Partition values <p>Measure of Dispersion</p> <ul style="list-style-type: none"> ● Range ● Variance and standard deviation ● Coefficient of variation ● Skewness and Kurtosis <p>Probability</p> <ul style="list-style-type: none"> ● Concept of Probability and distribution models; terms and definitions ● Normal distribution and its properties ● Binomial Distribution ● Poisson Distribution ● Calculations of probabilities for different events |

| | |
|--|--|
| <p style="text-align: center;">Unit III</p> | <p>Correlation & Regression</p> <ul style="list-style-type: none"> ● Concept of Correlation and Regression ● Linear and non- linear regression models ● Estimating coefficients of correlation and regression ● Calculation of fitted values and residuals <p>Test of Inference</p> <ul style="list-style-type: none"> ● Concepts of Hypothesis testing, p-value ● Concept of Parametric and non-parametric test ● Introduction to small sample and large sample test ● Applications of Chi- square test, t test, Z test ● One way & two-way ANOVA ● Concept & applications of PCA |
| <p style="text-align: center;">Unit IV</p> | <p>Concept of Mathematical Model</p> <ul style="list-style-type: none"> ● Exponential, logistic models for population growth ● Lotka-Voltera Prey and predator model ● Box model ● Gaussian plume dispersion model ● Point source stream model Leslie's matrix model <p>Applications</p> <ul style="list-style-type: none"> ● Statistical power and sample size ● Analysing and dealing with outliers ● Indices used for various Environmental variables ● Introduction to software used for Environmental data analysis |
| <p>Reference Books</p> <ul style="list-style-type: none"> ● Barnett Vic (2004) Environmental Statistics: methods and applications. ● Ott, Wayne R. (1995) Environmental Statistics and data analysis. ● Zar, Jerrold H. (1997) Biostatistical Analysis. Prentice Hall (India) ● Nychka, Douglas and Piegorsch Walter W (1998) Case studies in Environmental Statistics. ● Manly Bryan F.J. (2001) Statistics for Environmental Science and Management. ● Walpole R. and Myem R. (1993) Statistics for engineers and scientists. | |

EVS5302: Remote Sensing and GIS (Credits 4)**Course Outcomes**

After learning this course student will be able to

CO1: Understand the basic principles and processes that define Remote sensing and GIS.

CO2: Know satellites in space, their applications, data acquisition and recent advances.

CO3: Interpret satellite images visually and further process and classification using softwares .

CO4: Develop spatial thinking in GIS and use its geo-processes and functions.

CO5: Apply the understandings to address real life field issues using various softwares .

| Units | Contents |
|--|---|
| <p style="text-align: center;">Unit I</p> | <p>Basics of Remote Sensing</p> <ul style="list-style-type: none"> ● Introduction to Remote Sensing ● Remote Sensing Process ● Physics of Radiant Energy ● Electromagnetic Radiation and Electromagnetic Spectrum ● Energy Source and its Characteristics ● Atmospheric Interactions with Electromagnetic Radiation Atmospheric Properties ● Absorption of Ozone ● Atmospheric Effects on Spectral Response Patterns ● Energy Interactions with Earth's Surface Materials ● Energy Matter Interaction: Absorption, Emission, Transmission, Emission Spectral Reflectance Curves or Spectral Signature <p>Platforms & Sensors</p> <ul style="list-style-type: none"> ● Introduction ● Sensor Types: Active and Passive ● Sensor Parameters Spatial Resolution Spectral Resolution Radiometric Resolution ● Imaging Sensor Systems ● Multispectral Imaging Sensor Systems Thermal Sensing Systems ● Microwave Image Systems ● Platforms ● Airborne remote sensing Spaceborne remote sensing ● Satellites in the Space ● Open Data Satellites ● Commercial Satellites ● Weather Satellites ● Geodesy Satellites ● Ocean Satellites |

| | |
|------------------------|---|
| <p>Unit II</p> | <p>Visual Image Interpretation</p> <ul style="list-style-type: none"> ● Introduction ● Image Understanding and Interpretation ● Human Vision ● Interpretation elements ● Stereoscopic vision <p>Digital Image Processing</p> <ul style="list-style-type: none"> ● Introduction ● Principles of Image classification ● Image Classification Process Pre-processing ● Geometric Correction Radiometric Correction Atmospheric Correction ● Image Registration ● Image Enhancement Techniques Spatial Filtering Techniques ● Low Pass Filters High Pass Filters ● Filtering for Edge Enhancement Image Transformations ● Image Classification: Supervised and Unsupervised ● Accuracy assessment |
| <p>Unit III</p> | <p>Basics of GIS</p> <ul style="list-style-type: none"> ● Definition and Objectives of GIS, Concept of space and time, components of GIS, basic entities of GIS: line point and polygon ● Map Projection: Conical, Azimuthal and Cylindrical. LCC Projection, UTM and Polyconic projections. ● Types of datum <p>Data Structures in GIS</p> <ul style="list-style-type: none"> ● Spatial data: Raster data, Vector data, comparative overview. ● Non-spatial data - Hierarchical, Network and relational data. ● Concept and type of topology |
| <p>Unit IV</p> | <p>Spatial Analysis</p> <ul style="list-style-type: none"> ● Vector based: Overlays operations- point in polygon, line in polygon, polygon in polygon; ● Single layer operations and Multilayer operations. ● Raster based: Map algebra, Grid based operations. ● Buffering, Network Analysis, Terrain Analysis, Digital Terrain models and generation of Thematic maps. <p>Applications of RS and GIS</p> <ul style="list-style-type: none"> ● Land Use Land Cover (LULC) changes ● Natural hazards and hazard management: Floods, landslides and other hazards ● Monitoring water quality and soil quality ● Mineral exploration, ● Lithological and structural mapping ● Use of GIS to represent environmental status and highlight Environmental issues |

EVS5303: Climate Change and Sustainability (4 Credits)

Course Outcomes

After learning this course student will be able to

CO1: Understand the anthropogenic and natural drivers of climate change and future developments aspects for the sustainability.

CO2: Identify and evaluate the environmental, social, and economic impacts of anthropogenic activities and required sustainability framework for mitigation of the same.

CO3: Realise scope, importance, and opportunities for climate change and sustainability studies.

CO4: Sensitise about Impacts of climate change and future goals and of sustainability

CO5: Aware of various policies and agreements regarding these two aspects

CO6: Understand Methodologies for impact assessments and current practices of the societies

CO7: Learn appropriate tools and techniques for interpreting the impacts of climate change and methods for evaluation of sustainability.

| Units | Contents |
|----------------|--|
| Unit I | <p>Part I: Climatic Systems and Variations</p> <ul style="list-style-type: none"> ● Global Climate System ● Causes for Modern Climate Change ● Internal Variability: Ocean-Atmosphere Variability, Ocean Currents ● External Climate Forces: Greenhouse Gases, Orbital Variations, Solar Fluctuations, Volcanism, Plate Tectonics ● Evidence and Measurement of Climate changes <p>Part II: Consequences and Challenges</p> <ul style="list-style-type: none"> ● Impacts on Life, Vegetation, Fauna ● Glaciers and Ice Sheets Melting ● Sea Level Changes ● Economics of Climate Change ● Climate Change and Water Scarcity ● Coastal Ecosystem and Vulnerability ● Threats to Forest and Biodiversity ● Agriculture and Food Security ● Energy Generation and Climate Change Mitigation |
| Unit II | <p>Part I: Confronting Climate Change: Policies and Efforts</p> <ul style="list-style-type: none"> ● India: National Action Plan on Climate Change (NAPCC) ● State Action Plan on Climate Change (SAPCC) ● National Adaptation Fund on Climate Change (NAFCC) ● India's Post-2020 Climate Goals |

| | |
|-----------------|--|
| | <ul style="list-style-type: none"> ● Climate Change Action Programme (CCAP) ● National Carbonaceous Aerosols Programme (NCAP) ● Long Term Ecological Observatories (LTEO) Programme |
| | <ul style="list-style-type: none"> ● Clean Development Mechanism (CDM) ● Extreme Events and Disasters ● International Efforts ● UNFCCC and Conference of the Parties ● Special Reports by IPCC ● Kyoto Protocol and Agreements ● Copenhagen Conference ● Paris Agreement ● Findings and Efforts by NASA and ISRO |
| | <p>Part II: Mitigation Approaches in Climate Change</p> <ul style="list-style-type: none"> ● Climate and Weather Statistics ● Climate Change Modelling ● Carbon Emissions Reduction Technologies ● Climate Change Research ● Climatology Journals and Top Institutions ● Governance for Climate Change ● Clean Development Mechanism ● Technology Options Fuel Switching and Carbon Sequestration ● The Economics of Carbon Mitigation: Integrated Assessment Models (IAM) ● Regional, National and International Experiences |
| Unit III | <p>Part I: Concepts in Sustainable Development</p> <ul style="list-style-type: none"> ● Origins of Sustainable Development: Definition, Evolution and Principles, Brundtland Report ● Strategies for Sustainable Development ● Sustainability and Human Development ● Green Politics and Sustainable Development ● Cultural Elements in Sustainable Development Frameworks ● Human Centered Designs in Sustainability ● The 2030 Agenda for Sustainable Development <p>Part II: Sustainable Development Goals and Issues</p> <ul style="list-style-type: none"> ● UN Sustainable Development Knowledge Platform ● Tools for Sustainable Development ● Sustainable Development Goals ● Communicating the Sustainable Development Goals ● Criticisms in Sustainability ● Insufficient Stretching of the Term ● Cross-Cutting Issues ● Women and Gender Equality ● Education and Sustainable Development ● Implementation, Support and Tracking Progress |

| | |
|--|--|
| | <ul style="list-style-type: none"> ● Public Engagement in Sustainable Development |
| Unit IV | <p>Part I: Environmental Conservation and Sustainability</p> <ul style="list-style-type: none"> ● Technical Skills in Environment and Sustainability ● Vulnerability, Adaptation and Livelihoods ● Preservation of Biological Diversity ● Sustainable Forest Management ● Environmental Governance and Sustainability ● Environmental Economics and Sustainability ● Water Conservation and Sustainable Development ● Urbanization and Sustainable Cities ● Challenges in Energy, Food and Agriculture <p>Part II: New Developments in Sustainability</p> <ul style="list-style-type: none"> ● Appropriate Technology and Sustainability Science ● Consumption and Production Patterns ● Sustainable Transport ● Corporate Sustainability ● Sustainability Metrics and Indices ● Ecological and Carbon Footprint for Sustainability Measurement ● Sustainability Measurement and Reporting Tools ● Success Stories of Strategies in Sustainability ● Sustainability in Policy Design |
| Reference Books | |
| <ul style="list-style-type: none"> ● The Climate Fix: What Scientists and Politicians Won't Tell You About Global Warming by Roger Pielke, Basic Books (2010) ● The Climate Solution: India's Climate Change Crisis and What We Can Do About It by Mridula Ramesh, Hachette India (2018). ● This Changes Everything: Capitalism vs. the Climate by Naomi Klein, Penguin (2015). ● What Is Climate Change? Sachs and Ban Ki-moon, Columbia University Press (2015). ● Target 3 Billion: Innovative Solutions Towards Sustainable Development by APJ Abdul Kalam, Srijan Pal Singh, Penguin India (2011). | |

EVS5304: Environmental Issues and Solutions (4 Credits)**Course Outcomes**

After learning this course student will be able to

- CO1: Understand important environmental issues at the global, national and local level.
 CO2: Sensitise about Environmental problems faced by Indian and whole world.
 CO3: Findout unique approaches towards the solution of the issues in different societies.
 CO4: Develop a critical understanding of international and national efforts.
 CO5: Correlate ideal practices solution of the environmental issues.
 CO6: Identify new areas of research problems.

| Units | Contents |
|-----------------------|---|
| <p>Unit I</p> | <p>Part I: Global Environmental Issues</p> <ul style="list-style-type: none"> ● Ozone Layer Depletion ● Acid Rain and Its Spread ● Desertification and Expansion ● Greenhouse Effect and Global Warming ● Climate Change and Current Issues ● Energy Crisis and Issues ● Genetically Modified Organisms ● WTO and Environmental Issues ● Species Loss and Human Impacts <p>Part II: Global Environmental Issues</p> <ul style="list-style-type: none"> ● E-Wastes and Global Generation ● Food Crisis and Population ● Biological Warfare and Future Threats ● Eco-Terrorism and Issues ● Issues Related to Shipping ● Water Crisis and Future Conflicts ● Population Explosion and Resource Crunch ● Wastelands and Degradation |
| <p>Unit II</p> | <p>Part I: International Efforts</p> <ul style="list-style-type: none"> ● Sustainable Development Goals and Solutions ● Clean Development Mechanism ● Carbon Emissions and Future Targets ● Carbon Credits and Its Implementation ● Carbon Sequestration and Programmes ● Green Politics and Issues ● Role of IUCN and UNEP ● Important International Agreements |

| | |
|----------|--|
| | <p>Part II: Environmental Issues in India</p> <ul style="list-style-type: none"> ● Soil Erosion and Impacts on Production ● Alkaline and Saline Soils ● Industrial and Vehicular Air Pollution of Indian Cities ● Water Quality Degradation of Indian Rivers ● Groundwater Pollution and Its Consequences ● Municipal Solid Wastes and Conflicts ● Issues with Slums and Environmental Health ● Droughts and Floods in India ● Eutrophication Issues of Major Aquatic Ecosystems ● Dams and Displacement Issues |
| Unit III | <p>Part I: National Efforts to Curb Issues</p> <ul style="list-style-type: none"> ● Citizen Participation in Environmental Decisions ● Environmental Information System Network ● Right to Information and Environment Protection ● Policies and Laws on Environmental Protection ● Ganga Action Plan and Recent Programmes ● Interlinking of Rivers: Plan and Implementation ● Strategies under Disaster Management Plan ● Wasteland Development Programme ● Fly Ash Utilization Policy ● Rainwater Harvesting and Its Implementation <p>Part II: Environmental Issues and Genesis of Movements</p> <ul style="list-style-type: none"> ● Genesis of Environmental Movements in India ● Chipko Movement and Its Message to World ● Narmada Bachao Andolan and Outcome ● Developments in Save Silent Valley Movement ● Tehri Dam Conflict and Current Situation ● Indian Case Studies to Solve Issues ● Environmental Movements in Developed Countries |
| Unit IV | <p>Part I: Practices Followed in Environmental Conservation</p> <ul style="list-style-type: none"> ● Environment as Core Part of Sustainability ● Conservation for Economic and Social Upliftment ● Vulnerability, Adaptation and Livelihoods Security ● Conservation of Biodiversity and Forests for Survival ● Water Conservation as Important Constituents of Ecosystems ● Conservation in Smart Cities ● Future Energy, Food, Agriculture Security and Conservation ● Technical Skills Required for Environmental Conservation <p>Part II: Current International Developments</p> <ul style="list-style-type: none"> ● Need for Appropriate Technologies ● International Environmental Governance ● Polluter Pays Principle and Legal Liabilities |

- MNCs/TNCs and Corporate Social Responsibility
- Real Time Monitoring of the Issues
- Ecological and Carbon Footprint Calculations
- Life Cycle Assessment Studies for Organisations
- Sustainability Measurement and Reporting Tools
- Newer Approaches in Human Development Success Stories of Mitigating Environmental Issues

EVS 5305: Environmental Sustainability (4 credits)

- It is a MOOC course please refer <http://ugcmoocs.inflibnet.ac.in/ugcmoocs/courses.php> for course details.

EVS 5306: Summer Training (4 credits)

The world of today is full of competition in each and every field. In order to cop-up with the needs of the time it has become necessary to prepare ourselves in tune with the norms and practices accepted and implemented across the globe. As such, one of the important aspects is to add a value to a postgraduate degree by imparting a knowledge based and hands-on experience training to the students.

Guidelines:

- Students are expected to undertake the field work or industrial training for acquiring skills and hands on experience in the field of Environmental Science.
- Teachers of the department will be monitoring the progress of students by interaction with the students and concerned authority of training institute / organisation.
- After completion of the training, students need to submit the training report and present their work in the department.
- Student will be considered to have “Completed” the Internship/Industrial Training upon the submission of certificate of completion, duly signed and sealed, from the Organization where the candidate worked during the Internship period.

Reference: CREDIT SYSTEM (CS) For SEMESTER PATTERN Post Graduate Programs Handbook (Updated Version) Prepared by Professor Vilas Kharat and Dr. V. B. Gaikwad, Savitribai Phule Pune University, Pune.

EVS 5307: Environmental Science Practical – V (4 credits)**Course Outcome:**

CO1: Practicals based on Environmental data analysis will be done using various statistical tools.

CO2: Students will learn various computer-based tools for variable analysis.

CO3: Students will be introduced to basic techniques for visual image interpretation.

CO4: Students will be competent to use RS and GIS software for Environmental parameters.

CO5: Practicals based on Climate change will be helpful to increase understanding about Carbon footprint and sustainability.

CO6: Students will learn tools and techniques used for understanding Environmental issues.

Practicals based on EVS5301: Environmental Statistics

1. Classification of data and preparation of frequency distribution tables
2. Problem based on diagrammatic representation of data
3. Graphical data representation by Histogram and frequency polygon
4. Calculating measures of central tendency for the given data
5. Applications of partition values and problems based on it
6. Calculating variance, standard deviation and coefficient of variation for given data.
7. Problems based on probability distribution models
8. Use of statistical tables, analysing level of significance, p-value
9. Computing correlation coefficient and testing its significance.
10. Computing simple linear regression. Plotting scatter diagram and regression line
11. Comparison between means of two independent samples - Paired t-test
12. Method of analysis of variance: one way and two- way classification
13. Introduction to software used in Environmental data analysis

Practicals based on EVS5302: Remote Sensing and GIS

14. Introduction to Visual interpretation of satellite Image with FCC and True colour composite.
15. Overview of softwares as QGIS, ArcGIS, Global Mapper, Erdas Imagine etc.
16. Introduction to GPS and its handling, spatial data acquisition and import.
17. Georeferencing using Toposheet/Satellite image/GPS and subset creation.
18. Image classification using supervised, unsupervised and hybrid methods.
19. Ground truthing: A Field survey visit.
20. Accuracy assessment of classified satellite image using ground truth data.
21. Preparation Vector data as Point, Line, polygon and Vector layers creation.
22. Geoprocessing of Spatial data: Buffering, Clip, Crop.
23. Creation and linking of spatial and non-spatial data.
24. Preparation of Digital Elevation Model (DEM).
25. Map composition with Raster data and Vector data.

Practicals based on EVS5303: Climate Change and Sustainability

26. Measurements for the impact of environmental stress conditions on plants
27. Estimation of carbon sequestration by using different methods
28. Studies on plants facing pollutants from selected areas
29. Statistical analysis of the secondary data collected from metrological sites
30. Measuring the impact of climate change in a vulnerable population
31. Impacts of extreme events in selected areas: A case study
32. Use of RS and GIS technology in mapping climatic changes
33. Measurement of ozone concentration and analysis of the data
34. Preparation of documentary on climate change and sustainability practices
35. Preparation of documentary on sustainable practices of an organization or agency or village area
36. Studies on measurements of sustainable farming practices
37. Questionnaire survey based on online platforms and analysis
38. Measurement and analysis of the data by using online software about sustainability
39. Measurement of life cycle analysis by using online software
40. Measurement of sustainability by using innovative approaches and designs
41. Measurement of carbon footprint and ecological footprints by using online software
42. Analysis of the data and presentation of the data by using different software

Practicals based on EVS5304: Environmental Issues and Solutions

43. Analysis of fly ash for various parameters
44. Effect of fly ash as on plants, laboratory-based experiments
45. Analysis of artificially prepared and natural solid waste leachate for selected wastewater parameters
46. Questionnaire survey based genetically modified organisms by using Google forms
47. Study of acid rain solutions and its impact on physical materials
48. Effect of acid rain solution on plants/seed germination study
49. Demand for ecofriendly products available in market
50. Online softwares analysis for relation between drought and groundwater quality
51. Online softwares for mapping of carbon footprint and ecological footprint
52. Preparation of documentary for environmental issues of a specific city
53. Estimation of organic carbon from given plant sample
54. Use of online software for trajectory analysis
55. Study of carbon sequestration in laboratory by addition of artificial agents
56. Participation in at least one activity run by international NGO to solve environmental issues
57. Study on issues associated with dams
58. Study on issues of vehicular pollution on city on physical and biological areas
59. Understanding and Mapping for degradation of river ecosystem
60. Estimation of rainwater harvesting potential of Fergusson College campus
61. Preparation of video documentary of the issues faced by nearby populated areas

Note: Any other equivalent practical

SEMESTER – IV

From Academic Year
2020-2021

EVS5401: Environmental Law Ethics Policies (4 Credits)**Course Outcomes**

After learning this course student will be able to

CO1: Students will learn important provisions of environmental laws in India and international agreements

CO2: They will be introduced to role of constitution and various administrative mechanisms

CO3: They will understand the concept of environmental ethics and challenges associated with it.

CO4: Students will explore policies related to various natural resources.

| Units | Contents |
|----------|---|
| Unit I | <p>Environmental Law and Policy</p> <ul style="list-style-type: none"> ● Introduction to Law, Policy: Meaning, Basic difference and Importance. ● Indian Constitution and Environment ● Role of Constitution in Environment Protection, ● Fundamental Rights and Duties, Article 48A, 51A (g) and 58A ● Precautionary and Polluter pays principles; Absolute and Strict liability <p>Principles and Frameworks</p> <ul style="list-style-type: none"> ● Stockholm declaration ● Nairobi Declaration ● Rio Conference ● Kyoto Protocol ● World Summit on Sustainable Development (Rio + 10) ● Paris Agreement, CoP ● International Conventions: Convention on Biological Diversity, Convention on Climate Change, Ramsar Convention, Vienna Convention, Basal convention ● Role of UN authorities in protection of Global Environment |
| Unit II | <p>Environmental Laws in India: Anti-Pollution Acts</p> <ul style="list-style-type: none"> ● The Water (Prevention and Control of Pollution) Act,1974 ● The Air (Prevention and Control of Pollution) Act,1981 ● The Environment (Protection) Act,1986 ● The Public liability Insurance Act, 1991 ● The National Environmental Tribunal Act, 1995 <p>Environmental Laws in India: Conservation Acts</p> <ul style="list-style-type: none"> ● Indian Forests Act (Revised),1982 ● The Indian Wildlife (Protection) Act,1972 amended 1991 ● The Biological Diversity Act, 2002 ● National Green Tribunal Act,2010 ● Public Interest Litigation (PIL) |
| Unit III | <p>Rules and Regulations</p> <ul style="list-style-type: none"> ● Hazardous waste management and handling rules ● Solid waste management and handling rules ● Biomedical waste regulations ● Plastic waste management regulations |

| | |
|--|---|
| | <ul style="list-style-type: none"> ● Noise Pollution Rules ● E-Waste management rules <p>Consent applications and forms</p> <ul style="list-style-type: none"> ● Introduction to consent applications and categories; Process for new application and amendments ● Environment statement form ● Water cess form ● MSW applications ● Hazardous waste applications ● Bio-medical waste applications ● Plastic regulation application ● E-waste application |

EVS5402: Environmental Management Systems (4 Credits)**Course Outcomes**

After learning this course student will be able to

CO1: Students will learn important guidelines of environmental management system standards

CO2: They will be learning to identify and define environmental problems and apply appropriate knowledge and skills to selected case studies or real-life situations

CO3: Students will demonstrate ability to collect, record, process, interpret and present data using different qualitative and quantitative techniques

CO4: They will understand the concept of circular economy and its role in sustainable development

| Units | Contents |
|---|--|
| <p style="text-align: center;">Unit I</p> | <p>Introduction to EMS</p> <ul style="list-style-type: none"> ● Organization's approach to the Environment ● Basics of Environmental Management ● The system of Environmental management ● Projecting EMS: planning, implementation, general requirements, control tasks ● Evaluation of Environmental performance ● Selection of Environmental indicators ● CSR and Environmental management <p>Sustainability and cleaner production</p> <ul style="list-style-type: none"> ● Principles of sustainable development ● Concept of clean production ● Characteristics of cleaner production ● Clean process and clean products ● Industrial ecology ● Use of alternative resources, clean energy and technology ● Evaluation of cleaner production |
| <p style="text-align: center;">Unit II</p> | <p>ISO 14001:2015</p> <ul style="list-style-type: none"> ● Introduction to ISO governance, structure and functions ● PDCA cycle ● ISO 14000 family of standards ● ISO 14001:2015: Guidelines for implementation of standard <p>Life cycle assessment</p> <ul style="list-style-type: none"> ● Concept of LCA ● Phases: Goal and Scope definition, Inventory analysis, Impact assessment, Interpretation ● Types: Cradle to grave, Cradle to gate, gate to gate, gate to grave ● Applications of LCA ● Benefits and value of LCA evaluation |

| | |
|---|---|
| Unit III | <p>Circular Economy</p> <ul style="list-style-type: none"> ● Concept of circular economy ● Principles ● Implementation of circular economy ● Waste to wealth solutions ● Circular economy and sustainable development ● Benefits: Environmental, economic and social ● Challenges <p>Eco-innovation</p> <ul style="list-style-type: none"> ● Concept of eco-innovation ● Preparation, Strategy, Business model, Implementation and review ● Eco-designs ● Environmental cost and benefits ● Environmental aspects and impact assessment in process ● Sustainable value chain |
| Unit IV | <p>Environmental regulations in India</p> <ul style="list-style-type: none"> ● The Water (Prevention and Control of Pollution) Act,1974 ● The Air (Prevention and Control of Pollution) Act,1981 ● The Environment (Protection) Act,1986 ● The Public Liability Insurance Act, 1991 ● National Green Tribunal Act,2010 <p>Environmental Ethics</p> <ul style="list-style-type: none"> ● Concept of Environmental Ethics ● Ethical theories applied to the Environment ● Ethics in Environment management ● Environmental ethics and pollution ● Challenges of World Environmental Ethics ● Environmental ethics and sustainability |

EVS 5403: Life cycle assessment (4 credits)

- It is a MOOC course please refer <http://ugcmoocs.inflibnet.ac.in/ugcmoocs/courses.php> for course details.

EVS5404: Restoration and Watershed Management (Credits 4)**Course Outcomes**

After learning this course student will be able to

CO1: Be able to articulate the historical development of restoration concepts and the role that restoration can help in the future stewardship of natural resources.

CO2: Be able to describe the major ecological principles underlying the successful restoration of ecosystems including concepts of disturbance and succession.

CO3: Be able to use ecological and management principles and select appropriate methods and tools for designing and conducting restoration projects

CO4: Understand objectives, principles and functions of Watershed Management

CO5: Understand watershed management techniques

| Units | Contents |
|-----------------------|---|
| <p>Unit I</p> | <p>Part I- Restoration Ecology</p> <ul style="list-style-type: none"> ● History of Eco Restoration ● Definition and principles, ● Significances ● Guidelines ● Principles of Restoration ● Applications of Restoration Ecology <p>Part II-Restoration of urban ecosystem</p> <ul style="list-style-type: none"> ● Ponds, lakes, river banks, avenue trees, ● Biodiversity restoration through gardens, park, restoration of dumping grounds, ● Restoration of ecosystem on hills, ● Restoration of soil in urban areas, ● Ground water resource – replenishment, ● Sewage or wastewater – recycling for supporting ecosystems ● Case studies |
| <p>Unit II</p> | <p>Part I-Process of Restoration</p> <ul style="list-style-type: none"> ● Steps in the Process ● Understanding Limitations i) Biological Limitations ii) Physical Limitations iii) Chemical Limitations ● Overcoming Limitations (a few examples) i) Revegetation ii) Mulching iii) Equipment iv) Phytoremediation v) Collaborative Restoration <p>Part II-Restoration of other natural habitats/ecosystems</p> <ul style="list-style-type: none"> ● Mangroves ● Grasslands ● Wetlands and freshwater Ecosystems ● Degraded forest patches, ● Coastal ecosystems, ● Case Studies |

| | |
|--|--|
| <p>Unit III</p> | <p>Part I: Concept of watershed management</p> <ul style="list-style-type: none"> ● Definition, principle, objectives, ● Watershed morphology ● Characterization (with respect to size, elevation & slope, aspects & orientation, watershed shape, drainage network) <p>Part II: Watershed functions and survey</p> <ul style="list-style-type: none"> ● Collection, storage, dispersal, habitat, Attenuation response, flushing ● Engineering surveys involved in watershed development |
| <p>Unit IV</p> | <p>Part I: Water balance studies</p> <ul style="list-style-type: none"> ● Topographical survey, drainage line survey, contour survey, ● common instruments used for survey. ● Hydrological survey: Methodology for groundwater investigation, investigation of surface springs, ● vertical distribution of groundwater ● Case studies ● Water balance and hydrologic equation, inflow to the watershed, outflow from the watershed. <p>Part II: Water harvesting methods:</p> <ul style="list-style-type: none"> ● Traditional water harvesting structures such as nadis, Khadin, Rapats, Lakes, etc. contour bunding, graded bunds /field bunds, land leveling or terracing, farm ponds; ● Water harvesting in streams: Biological measures, check dam, gully plug, Gabion structure, Overflow weir, earthen dam, Underground bandhara. ● Soil and water conservation aspects: contour trenches, continuous contour benches, live hedges, infiltration pit, in situ conservation through appropriate cultivation practices ● Factors, problems associated with watershed management, ● Project monitoring and result indicators ● Repair and maintenance, etc. ● Success stories of watershed management/water harvesting projects in India and the world. |
| <p>Reference Books</p> <ul style="list-style-type: none"> ● Restoration of Nature by Prakash Gole ● Restoration Ecology the new frontier – edited by Jelte Van Andel and James Aronson – Wiley-Blackwell publication ISBN 9781444336368 ● A source book for Ecological Restoration, Foundation for Ecological Security 2008 ● Foundations of Restoration Ecology (The Science and Practice of Ecological Restoration Series), Donald A. | EVS5405: Green Technologies (4 Credits) | |
|--|---|
| Course Outcomes | |
| After learning this course student will be able to | |
| CO1: Introduce different concepts of green technologies in a project work. | |
| CO2: Understand the principles of energy efficient technologies. | |
| CO3: Estimate the carbon credits of various activities. | |
| CO4: Identify the importance of life cycle assessment. | |
| CO5: Apply knowledge and skills of biotechnology in a practical and project work. | |
| CO6: Recognize the benefits of green fuels with respect to sustainable development | |
| Units | Contents |
| Unit I | <p>Part I: Introduction to Green Technologies</p> <ul style="list-style-type: none"> ● Definition, Need of green technologies towards a sustainable future ● Green technologies in historical and contemporary perspectives ● Agenda of green development for future of the earth ● Sustainable consumption of resources ● Individual and community level participation ● Role of Industry, Government and Institutions ● 3 Rs of green technology: recycle, renew and reduce ● Emphasis on waste reduction instead of recycling ● Emphasis on research and innovations for green future ● Advances in science and technology for Environment friendly technologies in developed and developing world <p>Part II: Applications of Green Technologies</p> <ul style="list-style-type: none"> ● “Cradle to grave” approach in technology development ● Clean Production: Principles, importance, Historical evolution, Benefits, Promotion and Barriers ● Clean development mechanism, 3R, raw material substitution etc. ● Waste audit. Wealth from waste, case studies. ● Pollution Prevention and Cleaner Production, Awareness Plan, carbon credit, carbon sequestration, carbon trading |
| Unit II | <p>Part I: Green Infrastructure</p> <ul style="list-style-type: none"> ● Advances in green buildings and materials of high efficiency Construction and cost and benefit analysis ● Outlined examples of green buildings of the world ● LEED certification of buildings and future ● Eco-mark certification, scope and implementation <p>Part II: Green City Planning and Economy</p> <p>1. Concept of Green Cities</p> <ul style="list-style-type: none"> ● Technologies in waste management in cities and case studies ● Green cities of world and plans ● Role of informal sector in waste management and need for training ● Common public transport: ideas and plans ● Green belt development under various climatic conditions |

| | |
|--|--|
| | <p>2.Green Economy</p> <ul style="list-style-type: none"> ● UNEPs green economy initiative ● Inclusive economic growth of the society ● UN REDD+ initiative and cap and trade concept ● Green banking and success stories ● Green practices to conserve natural resources <p style="padding-left: 40px;">Importance and advances in ecological footprint</p> |
| <p style="text-align: center;">Unit III</p> | <p>Part I: Green Biotechnology: Green solutions to reduce pollution</p> <ul style="list-style-type: none"> ● Biopolymers and bioplastics: Concept, types and applications ● Biodegradable polymers: production and applications ● Biodegradation of synthetic polymers ● Comparative studies of polymer degradation and environmental significance ● Bioindicators: Concept, classification and applications ● Biotechnology for environmental remediation ● Microbial remediation process: Principles of bioremediation, ● Concept of bio augmentation and bio stimulation. ● Factors affecting bioremediation process ● Types of Bioremediation: i) In situ ii) Ex situ ● Phytoremediation: Concept, types and applications <p>Part II : Green Biotechnology : Green technologies in rural environment</p> <ul style="list-style-type: none"> ● Biopesticides: Classification of Biopesticides: Bacterial, Fungal, viral ● Microbial bio pesticides: Production, stabilization, formulation, mode of action. ● Plant Product as biopesticides: production, mode of action, effectiveness in pest management e.g. Neem pesticides ● Biofertilizers: Role of Nitrogen fixing and phosphate solubilizing microbes in soil fertility, Classification, mode of application and production of biofertilizers ● Composting and Vermicomposting: Raw material, Process, Design aspects, influencing factors. ● Need of decentralised composting in rural and urban areas ● Green fuels: Biofuels and Biodiesel ● Food safety and security using sustainable farming practices ● Hydroponics: Classification, production and application ● Agroforestry applications ● APCAEM and Green Technology Initiative ● Impact of green technology in rural areas: Socioeconomical, ecological and Environmental aspects. Case studies |
| <p style="text-align: center;">Unit IV</p> | <p>Part I: Green Chemistry</p> <ul style="list-style-type: none"> ● Introduction to green chemistry ● Principles and recognition of green criteria in chemistry ● Biodegradable and bio-accumulative products in environment ● Nanotechnology and its environmental applications ● Development of biodegradable and eco-friendly products ● Current research areas in green chemistry ● Waste reduction technologies in industries |

Part II: Energy efficiency enhancement**Green House Gas (GHG) emissions reduction**

- Carbon capture and storage (CCS) technologies, purchase and use of carbon offsets, methane emissions reduction and/or reuse
- Pollution reduction and removal (Flue Gas Desulfurization (FGD) methods, catalytic or thermal destruction of NOX,
- Fluidized Bed Combustion, Dioxins reduction and removal methods
- Thermal Oxidizers or Wet Scrubbers to neutralize chemicals or heavy metals
- Solvent recovery systems
- Low Volatile Organic Compound (VOC) paints and sealers

EVS 5406: Ecology and Society (4 credits)

- It is a MOOC course please refer
<http://ugcmoocs.inflibnet.ac.in/ugcmoocs/courses.php> for course details

EVS 5407: Environmental Health, Toxicology and Safety (4 Credits)**Course Outcomes**

After learning this course student will be able to

CO1: Acquire knowledge of fundamentals of occupational health and safety.

CO2: Understand the role and responsibilities of an occupational health and safety practitioner.

CO3: Aware about policies and legislation on safety in industries and workplace environments.

CO4: Gain a knowledge of the principles of toxicology.

CO5: Apply their skills of epidemiological studies for Research and social awareness.

| Units | Contents |
|-----------------------|---|
| <p>Unit I</p> | <p>Part I: Safety, Health and Environment</p> <ul style="list-style-type: none"> ● Historical developments in EHS, Perspectives and concerns, ● Interrelationship and interactive approach on EHS, ● Development projects and related aspects of safety and health, ● Implementation of EHS practices in MNCs. ● International agreements on EHS, Case studies <p>Part II: Safety and Health Hazards</p> <ul style="list-style-type: none"> ● Identification of potential safety and health hazards in industry, Occupational Health Hazards ● Introduction to ISO 45001:2018 standard ● Scope, Safety policy of the organization, Leadership and worker participation, operation and performance evaluation ● Concept of Hazard and Risk ● Risk Reduction strategies for hazards ● Radiation and Industrial Hazards ● Electrical Hazards and Fire hazards ● Vibration and Noise associated hazards ● National and international policies and legislation on safety in industries |
| <p>Unit II</p> | <p>Part I: Health, Safety and Risk Management</p> <ul style="list-style-type: none"> ● Concept of Risk and risk identification, ● Risk assessment and risk communication ● Risk characterization and risk management ● Allocation and mitigation strategies ● Responsibilities and authority, ● Principles of accidents prevention ● Potential of health risks in industrial and development processes ● Local and national policies, public awareness and participation in prevention procedures. ● Industrial environmental conditions ● Emissions and noise abatement. ● Ecological risk assessment |

| | |
|------------------------|---|
| | <p>Part II: Human Environment and Health Status in Urban and Rural India</p> <ul style="list-style-type: none"> ● Water and sanitation situation in urban and rural context, ● Historical perspective, ● WHO and other bodies and their role in public health projects development ● Policies and legal aspects on health and sanitation ● Eradication programs of diseases and health management ● Development impacts in urban and rural sectors, psychological impacts ● Public awareness of sanitation and hygiene issues ● Role of NGOs in environmental protection. |
| <p>Unit III</p> | <p>Part I: Toxic and hazardous waste management</p> <ul style="list-style-type: none"> ● Classification of toxic material ● Industrial toxicants and hazardous materials ● Product Stewardship ● Methods used for toxic and hazardous waste management ● Disaster management <p>Part II: Toxicology</p> <ul style="list-style-type: none"> ● Basic principles of toxicology: Concept of toxicants and xenobiotics ● Route of exposure ● Environmental Toxicology ● Classification of toxic materials. Industrial toxicants and hazardous materials ● Physiological and metabolic effects of toxicants, e.g.1) VOC and organic solvents, used in industry 2) Heavy metals such as Hg, Pb, AS, Cd etc. |
| <p>Unit IV</p> | <p>Part I: Evaluation of toxicity</p> <ul style="list-style-type: none"> ● Concept of Toxicokinetics and Toxicodynamics ● Bioconcentration, Bioaccumulation, Biomagnification and Bioavailability ● Factors determining adverse effects of toxicants: Intrinsic toxicity, dose, exposure conditions, response of host ● Parameters of toxicity testing: Acute toxicity, Chronic toxicity TU, ICp, TER, NOEC, LOEC, LC 50, LD50, TLm ● Toxicity testing methods: Using test animals ● Non animal toxicity test methods: In vitro cell and tissue-based method, In silico method and integrated testing method ● Toxicity test: Range finding, Screening, Definitive toxicity test ● Interaction of toxicants in combination: Additive, synergistic and antagonistic effects ● Alternatives to animal tests ● Mutagens, Teratogens and Carcinogen: Definition, sources, effects ● Prevention, treatment and control |

Part II: Water and airborne Diseases

- Potential and widespread effects of Water and airborne bacteria and viruses: Endemic, Epidemic and pandemic diseases
- Waterborne bacterial and viral Diseases: causative agent, Spread of disease, symptoms, preventive and curative measures. Case Studies
- Waterborne bacterial and viral Diseases: causative agent, Spread of disease symptoms preventive and curative measures. Case Studies
- Human immune-system and its vulnerability to these bacteria and viruses, Concept of Hurd immunity
- Biological warfare and protective measures
- Case studies: Swine flu, Cholera, Covid -19
- Safeguarding water sources and ambient air quality

EVS5408: Energy Resource and Technologies (4 Credits)**Course Outcomes**

After learning this course student will be able to

CO1: understand the basic principles and technologies of energy resources.

CO2: Students will introduce to basic concepts behind energy resources available in the environment.

CO3: Recognize various ways to harness energy and its importance

CO4: Analyze recent technologies available for energy harnessing

CO5: Apply skill of sustainable ways to get energy from available resources

| Units | Contents |
|----------|---|
| Units I | <p>Part I: Energy and Environment</p> <ul style="list-style-type: none"> ● Energy consumption as a measure of prosperity ● Global energy use pattern and impacts on the environment ● Energy usage: Heat, power, transportation, light ● Sources of energy and their classification ● Energy forms and transformation. ● Sun as source of energy and solar spectrum, ● Solar radiations: Absorption, reflection, scattering and diffusion in the atmosphere ● Renewable energy integration and decentralized generation systems. ● Electricity production and distribution: Electrical grid, smart grid, energy storage <p>Part II: Solar Energy</p> <ul style="list-style-type: none"> ● Harnessing of solar energy, ● Photovoltaics, Solar Home Systems ● Solar energy collectors and concentrators, ● Solar thermal heating: Solar water heater and CSP ● Solar electricity generation <ol style="list-style-type: none"> 1. Direct: with PV modules 2. Indirect: with Concentrated Solar Power (CSP) ● Applications of solar energy: Solar heaters, dryers, and cookers, solar thermal cooling ● Solar energy storage methods, Solar Kiosk |
| Units II | <p>Part I: Hydro electricity</p> <ul style="list-style-type: none"> ● Principle, Generating methods, ● Sizes, types and capacities of hydroelectric facilities. ● Classification of hydropower plants <ol style="list-style-type: none"> 1. Based on size: Large, medium, mini, micro, pico 2. Based on facility: Run-of river, Storage / Reservoir, Pumped storage ● Peaking with hydropower. ● Hydropower Potential: World and India. ● Hazard related to hydropower generation and distribution, ● Hydropower, Society and the Environment |

| | |
|-----------|---|
| | <p>Part II: Geothermal and Hydrothermal Energy</p> <ul style="list-style-type: none"> ● Types of geothermal resources: hydrothermal geopressed, hot dry rock, magma ● Natural geothermal fields, Exploration and drilling ● High temperature and low temperature aquifers, ● power generation from Geothermal energy: Dry Steam Plants, Flashed Steam Plants, Binary-Cycle Plants, supercritical cycle ● Prospects of geothermal energy: World and India ● Hydrothermal energy: Vapour and liquid system; ● Operation and environmental problems. ● Applications of Geothermal energy |
| Units III | <p>Part I: Fossil Fuels</p> <ul style="list-style-type: none"> ● Concept of fossil fuels. ● Classification and composition ● Formation, reserves, and consumption ● Exploration, hydraulic fracturing, drilling mining, processing, and transportation ● Environmental problems associated with fossil fuel ● Case studies of thermal power plants <p>Part II: Bio-energy</p> <ul style="list-style-type: none"> ● Biomass composition and types ● Biomass Conversion processes: direct combustion, thermo chemical, biochemical processes ● Production of Solid, liquid and gaseous fuels from biomass: pyrolysis, charcoal production, ethanol, methanol, esters and hydrogen ● Electricity generation from biomass ● Biodiesel Production ● Energy plantation ● Biogas: anaerobic digestion production and uses, ● Energy from Solid Wastes: Sources, types, energy production. ● Bio-energy and Waste to Energy Conversion Systems ● Energy Conservation and Management |
| Unit IV | <p>Part I: Nuclear energy</p> <ul style="list-style-type: none"> ● Nuclear energy generation: Nuclear fission and fusion ● Nuclear fuel cycle: Nuclear fuel production and processing Mining and processing of Uranium, concentration, refining, Enrichment and fuel fabrication ● Nuclear waste generation sources and classification ● Treatment and disposal of radioactive waste. ● Environmental implications of Nuclear energy. |

Part II: Wind energy

- Principle of Harnessing of wind energy
- Factors affecting wind energy generation
- Power generation by wind mills, concentrators,
- Wind characteristics and siting,
- Environmental considerations
- Wind energy potential in India.
- Numerical Methods and Computational Techniques,
- Wind Energy.
- Conversion Systems

EVS 5409: Waste to Energy conversion (4 credits)

- For MOOC course please refer <http://ugcmoocs.inflibnet.ac.in/ugcmoocs/courses.php> for course details.

EVS 5410: Environmental Science Practical – V (4 credits)**Course Outcome:**

CO1: Practicals based on Environmental Law, Ethics and Policy will help students to understand challenges associated with Environmental governance.

CO2: Students will learn various guidelines for Environmental management system management.

CO3: Students will be introduced to basic techniques for Environmental risk analysis and toxicological studies.

CO4: They will acquire skills related to watershed management.

CO5: Students will be competent to apply simple and sustainable energy options.

Practicals based on EVS5401: Environmental Law Ethics Policies

1. Baseline survey on provisions under selected environmental laws
2. Learning and understanding law specific case study
3. Study of regulations under specific laws
4. Study of major judgement given by courts on selected law
5. Study of case studies related to fundamental duty and rights
6. Preparation of drafts report on various Environment related policies in India
7. Learning: How to file case under Environmental laws
8. Study and understanding of consent forms
9. Study of challenges associated with Environmental governance
10. Study of issues and challenges associated with Environmental ethics

Practicals based on EVS5402: Environmental Management Systems

1. Study of industrial process for Environmental management
2. Identification of Environmental aspects of a process
3. Identification of Environmental impacts and its assessment
4. Writing Environmental policy for an organization
5. Understanding environmental objectives from policy statement
6. Study of PDCA cycle
7. Case studies based on circular economy
8. Study of success stories of Eco-innovation
9. Study of challenges associated with Environmental governance
10. Study of issues and challenges associated with Environmental ethics

Practicals based on EVS 5404: Restoration and Watershed Management

1. Visit to Restoration site and survey of techniques used in Restoration
2. Study of phytoremediation techniques.
3. Preparing/Monitoring a plan of restoration.
4. Delineation of watersheds using toposheets and estimation of perimeter, area and slope.
5. Surveying and preparation of watershed map.
6. Quantitative analysis of watershed characteristics and parameters.
7. Watershed investigations for planning and development: identifying specific watershed interventions required.
8. Visit to watershed development project areas.

Practical based on EVS 5405: Green Technologies

1. Monitoring a plan for Green city
2. Study of various indices used for Green City.
3. Conducting green audit of a building/ institution.
4. Market survey for organic products/green product/eco-friendly products.
5. Development and study of hydroponic system.
6. Study the plant growth characteristics using hydroponic system.
7. Survey and analysis of data for sustainable agriculture practices/organic farming in rural area.
8. Isolation of phosphate solubilizing bacteria/fungi.
9. Estimation of phosphate solubilization efficiency of bacteria/ fungi.
10. Wastewater treatment by phytoremediation technique.

Practical based on EVS 5407: Environmental Health, Toxicology and Safety

1. Conducting ecological risk assessment.
2. Conducting Human risk assessment.
3. Effect of toxicant on chick embryo
4. Effect of toxicant on seed germination
5. Fish bioassay for toxicity testing
6. Probit Analysis for toxicity studies
7. Finding the LC_{50} / LD_{50} dose of toxicant/ pollutant
8. Survey for identification of effect of pollution on human health
9. Monitoring effect of pollution on aquatic ecosystem
10. Monitoring effect of pollution on plants
11. Safety audit in industries.
12. Epidemiological studies: Ecological Study/Cross sectional study/ Case control study

Practicals based on EVS5408: Energy Resource and Technologies

1. Computing or Measurement of hydropower capacity of a selected site.
2. Monitoring of sustainability of Solar Home Systems based on questionnaire and field survey.
