Consultancy Services

We have created laboratory facilities for conducting research and developed instrumentation viz **Contact – Angle Goniometer** set-up for studying the characteristics like surface wettability, surface tension of liquids etc. Also, the research facilities in the laboratory which includes **Potentiostat-galvanostat**, Milli-Q deionized water purifier, tube furnace (temperature range upto 1150 °C) under controlled environment (Ar, N₂ etc.), Newport Solar Simulator (USA based), battery tester (coin-cell), Hot Roll Press and Coin- cell cutting machine, dip coating unit, spin coater, hydrothermal autoclaves, fume hood for reaction, vacuum oven, laboratory oven etc.

In addition, The additive manufacturing facilities also include 3D printer, Direct Ink Writer (DIW) which is used for carrying out research project work in the laboratory and these facilities will be explored for collaborative work as well as consultancy services.
